

Card Access

- Omnilock WAMS -

WAMS Overview

Omnilock Wireless Access Management System (WAMS) combines market leading technology with the reliability and durability you can depend on. With its unique stand alone design installation costs are drastically reduced. Most applications require no additional door preparation and no wiring, while still providing all the same benefits of a traditional wired system.

From your office you can easily program and update the system. Additionally all access decisions are made at the door. So if the power goes out the doors will continue to operate.

WAMS Key Features

Reduced Labor Cost

100% wireless design means the system can be installed in hours not days like traditional systems.

Remote Lockdown

Remotely lockdown your entire facility with the click of your mouse during an emergency.

Easy Retrofit

Most installations require very little or no additional door preparations.

Fail Secure

If power goes out or the network goes down the system will continue to operate normally.

About Us

COR Security has worked closely with customers, since 1986, to insure they have the right tools to address their current problems and are flexible enough to adapt to future ones. Our large coverage area means your Card Access, Security Cameras and Locksmith Services needs can be addressed any where in San Diego County.
